A BETTER, LIGHTER YOU IN JUST 5 DAYS

Reset your eating habits.

What is ProLon® FMD®?

ProLon FMD is a **groundbreaking nutritional program** that includes 5 days' worth of convenient, tasty, plant-based foods. These foods are specially formulated to put your body in a fasting state—even though you're eating.

The **benefits of fasting three consecutive cycles** are well-documented:

Reduction of visceral fat*
while preserving lean body mass

Metabolic balance*,
which includes maintaining healthy systolic blood pressure

Cellular clean-up and renewal

*Benefits seen with multiple consecutive monthly cycles of ProLon.

What Exactly is Cellular Clean-up & Renewal?

During prolonged fasting, your body starts a **self-cleaning process** called **cellular clean-up** (also known as **autophagy**). Think of this process of autophagy as a biological vacuum that cleans and recycles old and damaged internal parts of the cells, resulting in a profound benefit: cellular rejuvenation.

The ProLon 5-Day Journey

Can I Simply Fast on My Own For These Health Benefits?

Prolonged fasting can be dangerous and difficult to complete on your own. The ProLon® program contains a **scientifically-researched** combination of micro- and macro-nutrients. This **unique nutritional formulation nourishes your body** — while still enabling it to enter a fasting state that provides metabolic and cellular benefits. ProLon users say they have reduced food cravings, better portion control, and healthier eating habits after completion.

How is ProLon® different from Intermittent Fasting (IF) or Time-Restricted Eating (TRE)?

Intermittent fasting (reducing calories on certain days in a week) and time-restricted eating (limiting eating to certain hours in a day) can help reduce fat and support metabolic balance. But prolonged fasting—as enabled by ProLon—can actually **affect your body on the cellular level** by inducing cellular clean-up and rejuvenation.
